

# Subdomains auto redirect

on domain.tld we have different websites under default, f.e.

www.domain.tld/default/site\_one , www.domain.tld/default/site\_two, .....

We want a rewrite rule so that site\_one.domain.tld will be redirected to the site www.domain.tld and the same for site\_two and any other (new) site.

In stead of using virtual hosts we can use the following apache redirect rule which needs to be placed in the document root, in the file `.htaccess`

```
<IfModule mod_rewrite.c>
RewriteEngine on
RewriteCond %{HTTP_HOST} ^((?!www).)+.maxdata.ovh$ [NC]
RewriteRule "(.*)" "http://www.maxdata.ovh/default/%1" [NC]
</IfModule>
```

The condition is that the subdomain is not equal to 'www', if so the redirect will take place and traffic will be redirected to [www.domain.tld/default/subdomain](http://www.domain.tld/default/subdomain)

## Apache2 (on Ubuntu Server)

Check met phpinfo() in php file of mod\_rewrite aan staat (ctr-f in phpinfo() page)

```
sudo a2enmod rewrite
sudo service apache2 restart
```

## PHP Info

```
<?php
phpinfo();
?>
```
