

# Linux Tips&Tricks

Handy one liners to manipulate files

- [Change text in files](#)
- [.bashrc](#)

# Change text in files

**Recursively change text (used in for laurasrecepten.nl when moving the site)**

```
find . -type f -exec sed -i 's/www\.laurasrecepten\.nl/aws\.laurasrecepten\.com/' {} \;
```

# .bashrc

## Prompt

```
PSI='\u@\h:$PWD:'
```

## History

```
HISTSIZE=20000  
HISTFILESIZE=20000  
  
export HISTCONTROL=ignoredups  
export HISTTIMEFORMAT='%F %T '
```

## Aliases

```
alias rm='rm -i'  
alias cp='cp -i'  
alias mv='mv -i'  
alias rmlink='/bin/rm -ivr'
```
