Linux Tips&Tricks

Handy one liners to manipulate files

- [Change text in files](#)

- [.bashrc](#)

Change text in files

Recursively change text (used in for laurasrecpten.nl when moving the site)

```
find . -type f -exec sed -i 's/www\.laurasrecepten\.nl/aws\.laurasrecepten\.com/' {} \;
```

.bashrc

Prompt

`PSI='\u@\h:$PWD:`

History

```
HISTSIZE=20000
HISTFILESIZE=20000

export HISTCONTROL=ignoredups
export HISTTIMEFORMAT='%F %T '
```

Aliases

```
alias rm='rm -i'
alias cp='cp -i'
alias mv='mv -i'
alias rmlink='/bin/rm -ivr'
```
