

Dynamic return page

In an update store referrer in Yii session and use it to return to when update is done.

```
// Store return URL, just before return to update view.
```

```
Yii::$app->user->returnUrl = Yii::$app->request->referrer;
```

```
// return to saved URL
```

```
$returnUrl = Yii::$app->user->returnUrl ? ['/aaa/bbb', 'id' => $id]; // if not saved go to default
```

```
return $this->redirect($returnUrl);
```
