

Helpers

HTML::a

```
// both the same
return Html::a($data->naam, ['/examen/update?id='.$data->id], ['title' => 'Edit',]);
return Html::a($data->naam, ['/examen/update', 'id' => $data->id], ['title' => 'Edit',]);

// back
<?= Html::a( 'Cancel', Yii::$app->request->referrer , ['class' => 'btn btn-primary' ]); ?>
```

Array helper

```
use yii\helpers\ArrayHelper;

$dropdownlist = ArrayHelper::map($student, 'id', 'naam');

//input [ [ 'id' => '999', 'naam' => 'Mark de Groot'], [ 'id' => ..... ], [ .....], ....]
//result [ '999' => 'Mark de Groot', ...];
```

Link met confirm (gidview Widget)

```
echo Html::a("<span style=\"color: #800000\" class=\"glyphicon glyphicon-print\"></span>",
    ['print/index', 'id' => -99],
    [ 'title' => 'Print ALL',
      'data' => [
        'confirm' => 'Are you sure you want to print this item?',
        'method' => 'post',
      ],
    ] );
```

Link met confirm en tooltip (Html::a)

```
Html::a("<span class=\"glyphicon glyphicon-trash\"></span>",
    ['/uitslag/remove', 'studentid' => $dataSet[$naam]['studentid'], 'examenid' => $examenid ],
    ['data-confirm' => 'Delete all results from '.$naam.' from this exam?', 'title' => 'Verwijder uitslag']);
```

Html::a([naam], [link, parameter, parameter], [options])

Options in het bovenstaande voorbeeld: *data-confirm* en *title*. Andere option is *class*

Yii::\$app

```
Yii::$app->requestedRoute;           // route, example query/help  
Yii::$app->controller->action->id    // action, example help
```
