

# Unsorted Notes

## Voor- nadelen Laravel v. Yii

	Laravel	Yii
MVC	✓	✓
Model	Eloquent	Active Record
View/templating	Blade	PHP met 'Yii Snippets'
Routing	Expliciet	Impliciet / Expliciet
Migrations	✓	✓ (meer als optie)
Model creations	command line	GUI, reverse engineered form DB
Controller Creation	command line	GUI, create full CRUD
View creation	?	GUI, create full CRUD
Documentation	***	**
Active development	✓	✓
Add Ons / Libraries	***	**
Install Base (volgens Google)	484,970	58,800

Grootste voordeel is de GUI waarmee je reverse engineered een CRUD maakt.

## Install Datepicker

(in project root)

change in file composer.dev "minimum-stability": "dev",

```
composer clear-cache  
composer require kartik-v/yii2-widget-datepicker
```

<https://github.com/kartik-v/yii2-widget-datepicker>

## Create (temporary swap on Ubuntu)

```
free -m  
  
total used free shared buffers cached  
Mem: 2048 357 1690 0 0 237  
-/+ buffers/cache: 119 1928  
Swap: 0 0 0
```

```
/bin/dd if=/dev/zero of=/var/swap.1 bs=1M count=1024  
/sbin/mkswap /var/swap.1  
/sbin/swapon /var/swap.1
```

<https://getcomposer.org/doc/articles/troubleshooting.md#proc-open-fork-failed-errors>

## Install Bootstrap 4

```
composer require --prefer-dist yiisoft/yii2-bootstrap4
```

## Redirect

```
return $this->redirect(['view', 'id' => $model->id]);
```

## Post form on dropdown change

```
<select name="status" id="status" onchange="this.form.submit()">
```
